New 2023

A+ | 9,0 kW-N | 258 m³

CHARACTERISTICS

- Shell and tube exchanger
- T tube integrated in the product, inspectable from the rear
- Hearth, door fire and brazier in cast iron
- Safety button
- Extractable ash drawer
- FPC – An innovative adaptive system for regulating and maintaining air combustion constant over time
- FPC PLUS - besides the work carried out by FPC, it allows abnormal situations to be noted by setting the generator in safe conditions.
- With AIR ZONE CONTROL (AZC), the speed of rotation of the ducted fan is controlled in order to maximise the transmission of thermal power in the ducted environment.

ISIDORA IDRO H2O

Ventilated pellet thermo-stove

Evolution
Life

A++ | 23,2 kW-N | 20,0 kW-H₂O | 665 m³

CHARACTERISTICS

- Air relief valve
- Upper room ventilation with dedicated motor, excludable
- Output smoke outlet possibilities: rear aligned
- Pressure transducer and display pressure value indication
- Combustion chamber in thick steel
- Ergonomic handle
- Door fire and brazier in cast iron
- Hermetic tank
- Combustion chamber probe
- Shell and tube exchanger (manual cleaning)
- Thermal and pressure safety
- Wide fire vision
- Expansion tank
- Safety valve 3 bar
- Extractable ash drawer

BOILERS AND THERMO PRODUCTS

IT IS IMPORTANT TO SEEK THE GUIDANCE OF A QUALIFIED TECHNICIAN WHO IS ABLE TO RECOMMEND THE MOST SUITABLE TYPE OF BOILER OR HEATING DEVICE.

By way of providing generic information, we highlight below the main information one must have in order to make an informed decision when choosing an appliance:

- Thermal requirements of the home
- Type of existing heating system: radiators, fan coil units, or radiant panels
- Type of distribution system: one-pipe, two-pipe or manifolds
- Indication of whether, in addition to heating, the boiler is also intended for the production of domestic hot water
- Any set-up for or installation of thermal solar collectors
- Most suitable type of storage: DHW storage tank or puffer

Accordingly, it is important to seek the guidance of a qualified technician who is able to perform a precise analysis of the system, provide explanations to any questions, including regulation requirements for installation, and recommend the most suitable type of boiler.

A correctly designed therefore guarantees:

- complete safety of one's home
- maximum comfort
- high yield of heat generator
- maximum savings
- less wear to the parts and therefore longer service life of the appliance

Control Solution

Tecnologia, Comfort e Risparmio

Discover the innovative solutions to manage the comfort of your home at best and in utter convenience thanks to your pellet product.

ACCESSORY

Display Balck Mask

New display Black Mask with Wi-Fi connection integrated allowing a remote management with the new App "Total Control 2.0"

Glass cleaning system
A system of pre-heated air which removes any deposit from the fire-door glass.

Extractable burn pot for easy cleaning
The burn pot's system of construction allows easy extraction for quick and complete cleaning.

PELLET

Auto-adjustment of the fumes extractor (encoder)
It keeps the RPM of the fumes motor constant, to ensure correct combustion of the product.

WOOD-BURNING

Hearth in Nordiker
La Nordica-Extraflame uses a special material called Nordiker for the production of hearth walls refractories.

Post combustion
The combustion system developed by La Nordica-Extraflame allows, due to a secondary/tertiary air system, a post combustion which significantly reduces emissions.

Hopper safety thermostat
Ensure always high safety standard, preventing the overheating of the product in case of anomaly.

1st and 2nd air auto-balancing
Primary and secondary air electronically balanced for an optimal combustion and thermal efficiency.

Outdoor temperature thermostat input
The product interfaces with room temperature control devices (thermostat or contacts) to achieve the selected temperature in every room.

Doors in cast iron
The high-quality cast-iron doors are made to last and ensure perfect sealing at all times.

Automatic safety device
It is a safety device created to quickly reduce water temperature, according to rules in force. DSA valve not included.

Air-tight seal test at 50 Pa (100% of the products)
All the air-tight products, or even those that have some "air-tight" components (like the hopper), are tested under high pressure at the end of the production line to ensure their safety and optimal performance.

Flue pipe safety pressure switch
Checks the correct evacuation of the fumes and, in case of need, locks the loading of pellets, to avoid problems on the generator.

Chrono-thermostat
Chronothermostat provided with temperature control divided in four daily slots for an optimal rooms management.

Glass cleaning system
A system of pre-heated air which removes any deposit from the fire-door glass.

Direct outdoor air intake (BBC)
Air intake system which draws fresh air from outside directly into the adjust system combustion regulation of the firebox of the appliance.

Auto-relighting after black-out
Following a black out the appliance automatically re-starts after having carried out the scheduled auto-control.

Room temp. thermostat
The room probe optimizes comfort and lowers noticeably the consumption.

Clean combustion
Increases the combustion efficiency and the duration of parts subject to wear duration reducing at the same time the ordinary brazier cleaning.

Outdoor air intake (ASC)
A particular connection system which allows to introduce air from the outside into the pre-heated environment around the fire-box.

Radiant system (PRS)
High efficiency Heat exchanger system

CERTIFICATES

Italian Regulation for the Environmental Certificate release of domestic solid fuels biomass room heaters (Classification from 1 up to 5 stars).

BlmSchV

German regulations on controlling emissions.

Only for Italy: the Ministerial Decree 28/12/12, better known as “Conto Termino”, allows a specific incentive in case of replacement of old appliances by new ones with certain characteristics

15a B-VG

Compliance with article 15 of the Austrian federal constitutional law on environmental protection measures.

French trademark of the ADEME agency for the environment and the energy. The products “Flamme Verte” approved guarantee the best high energy performances and respect for the environment.

ECODESIGN

European certification defining the ecodesign guidelines for biomass products.

Certification issued by the French Scientific and Technical Building Centre – CSTB – for watertight devices tested in watertight installation conditions.

MFB

Only for Germany: The products is ready to be connected to a multiply chimney connection , just when the installation is made in accordance with requirements of the regional and national standards, and when observed the norms DIN EN 13384-2, DIN V 1816-1, DIN 18896 and MFeuV-2007 (Muster-Feuerungsverordnung), and that the district chimney sweeper has checked and approved the correct installation.

Certification issued by the German Federal Office for Economics and Export Control to promote the efficient use of biomass energy.

MAKING THE RIGHT CHOICE - THINK OF THE ENVIRONMENT, EVEN IN YOUR OWN HOME

When you decide to buy a wood burning range, a fireplace, a boiler or a wood or pellet burning stove, a series of factors influence your choice. La Nordica-Extraflame has provided this tool to help you find what you need.

1 Flue Pipe

Should be considered as the main element for smoke disposal. It must be built with material able to resist to high temperature, better with a circular shape, and 4 meters as minimal height without bends.

2 Connection Pipe flue

Appliance flue connection pipe must be shortest, with few horizontal parts as possible and with the same diameter of the collar pipe appliance connection.

3 Air Intake

It should be checked as correct appliance installation if do exist an external air intake big enough to offer a whole and efficient combustion.

4 Chimney

Put on the top, it must have the same internal section of the chimneypot, while the exit one must be twice compared to the flue pipe diameter to guarantee the residual combustion disposals and protecting against environment.

5 Canalization

It is always important to assess the maximum air-ductable distances of the installed product.

6 Thermo products

By choosing what thermo product to install, specific individual needs have to be considered in addition to a meticulous assess of the global thermal power needed by the heating system and of the installation place.

7 Heatable m³

The data is indicative. For the generator to be sized correctly, contact a skilled technician/designer. The total volume to heat, the thermal building insulation grade, the sun exposure and the climatic zone have to be determined in order to make the best choice about the fireplace or stove to install. This is the only way to quantify the environmental needed heat.

Nominal power kW	m³ to heat
5 - 8	150 - 200 circa
8 - 12	200 - 300 circa
12 - 20	300 - 500 circa

Referred to the need of 30 kcal/h x m³

LIST OF FUNCTIONS OF PELLET PRODUCTS

EASY SETUP

The *Easy Setup* function allows the user to easily configure the stove so that it can operate as efficiently as possible with most types of pellets available on the market. It ensures optimum performance in terms of yield for each type of pellet.

EASY CONTROL

In order to function, a stove must be connected to a system that has a flue and an external air inlet. Not all systems are the same as they depend on the physical characteristics of the building in which they are used: consequently, the operating conditions of the stove can vary considerably depending on the system itself. Thanks to the Easy Control function, the stove operates under optimal conditions even in difficult situations, minimising unwanted effects such as condensation and poor combustion, and it can also help to keep the glass of the stove door cleaner.

FLOW PERFORMANCE CONTROL (FPC)

The FPC system keeps the supply of combustion air constant at all times, thus ensuring that combustion characteristics remain the same. In this way, maximum stove efficiency is achieved even when the system conditions (stove+flue pipe) change.

SELF CONTROL

All Extraflame products use an automatic power management system (maximum power or minimum power) that allows the stove to reach the room temperature set by the user. Therefore, with the Self Control management mode, the desired temperature is reached in the shortest possible time.

AUTOMATIC

Automatic is the evolution of the Self Control function. The stove accurately and continuously regulates the power output in order to reach and maintain the temperature set by the user. This translates into improved thermal and acoustic comfort and reduced consumption.

AIR ZONE CONTROL (AZC)

The Air Zone Control feature is exclusive to products with a dedicated motor for ducting. The AZC function ensures maximum heat output to the ducting when the room in which the stove is installed has reached the set temperature. Therefore, in this mode, maximum comfort is achieved in the ducted area and consumption is significantly reduced when the set temperature is reached in the main room.

PRO AIR SETUP

New setup for ventilation mappings. It allows the user to choose between 4 different room ventilation modes:
Off = Fan off. N.B. Mode only available for models that have this setting option.
Quiet = Fan speed is reduced for noise reduction (compared to Regular).
Regular = Default configuration.
Boost = Fan speed is increased compared to Regular in order to maximise ventilation air flow.

INTEGRAZIONE DOMOTICA "ALEXA"

With this extra feature, the stove can be controlled via the "Alexa" (Amazon) voice assistant. This operation requires an Internet connection + the new Total Control 3.0 app: therefore, the product must have the "Grey" module or have this function integrated in the board/display set up for the 3.0. app.

NOTE

- Due to printing reasons the reproduction of colours has to be considered only indicative.
- The fuel quantity (weight) inside the hopper and the hour consumption can change depending on the type of pellet which is used.
- All the figures were measured using approved pellets in compliance with EN ISO 17225-2.
- Facing tones and characteristics are subject to slight variations because they are natural products.
- The manufacturer reserves the right to change the products without any previous notice.
- The La Nordica-Extraflame products can be covered by industrial property rights (such as patents, designs and trademarks) owned by La Nordica-Extraflame exclusively. It is strictly forbidden to violate these rights as for removing, cancelling or corrupting the trademarks impressed on the products and impressing others.
- m³ that can be heated: the data is indicative. For the generator to be sized correctly, contact a skilled technician/designer.
- Before the purchase, ask your reseller all the information regarding the appliance. One must also bear in mind all laws and national, regional, provincial and town council Standards present in the country in which the appliance has been installed, as well as the instructions contained in this manual.
- The images contained in this document are for product illustration purposes only and do not represent indications for the performance or technical characteristics of the same.
- The data in the catalogue can be rounded off to the first decimal.
- La Nordica-Extraflame products are approved to work with 230V 50Hz power supply only. The use with different voltages and / or frequencies supply can compromise the functionality and safety of the products.

ENERGY LABEL

As of 1st January 2018 the Energy Labelling Regulation came into force also for all the biomass heating appliances, both roomheater appliances and appliances designed to heat the water for central heating and domestic hot water.

This directive, in accordance with the regulations of the European Union, will assign an Energy Efficiency Class (from G up to A++) providing the buyers with information about the consumption and the efficiency
